

**BROWNIE BRAND®**

# BUNDLE KING

Sterile Forage Sorghum

AGRONOMIC ATTRIBUTE	
Potential Forage Yield	4
Early Growth Rate	3
Regrowth	3
Average Plant Height	6'-7'
Standability	3
Drought Tolerance	3
Leafiness	3
Avg. Seeds/Lb	18,000
Fast Dry Down	1
Sweetness	2

PRIMARY USES	
Hay	1
Hay Plow Down	2
Silage	3
Grazing/Pasture	1
Greenchop	2

## POSITIONING/MANAGEMENT

Bundle King is a fast growing medium early hybrid that produces very sweet, juicy stalks that can be either grazed, baled or used for greenchop. Bundle King is a sterile hybrid that will not produce seed in the absence of pollen, which allow for more of the proteins and sugars to stay in the plant instead of being transferred to the head in the growth process. Bundle King also has an excellent leaf to stem ratio and is great to start new calves on.

## ANNUAL SUMMER MANAGEMENT

**Planting Date:** Late April through mid August. Soil temperature should be 60-65 or warmer. Planting too early could cause slow early growth and reduction in population.

**Planting Depth:** 3/4" to 1 1/2" deep dependent upon the soil moisture.

**Row Width:** Preferably drilled in narrow rows

**Planting Method:** Drill preferred.

**Fertility:** Nitrogen: 75 to 100 lbs./acre PPI & 50 to 75 lbs./acre after first cutting. Phosphorus: 20-60 lbs./acre, more if the soil testing indicates less than 30 lbs./acre. Potassium: 40-80 lbs./acre. A soil test should be performed for better accuracy. The above fertilization rates serve as a guide only.

Feed Analysis	
Crude Protein	8.94
Acid Detergent Fiber	29.48
Total Digestible Nutrients	67.05
NE (lactation) Mcal/lb	0.69
NE (gain) Mcal/lb	0.67

## YIELD

1 to 3 cuttings dependent upon planting date, availability of water, and growing season. 3 to 6 tons/acre dry matter (20 to 40 tons green weight).

## GRAIN SORGHUM PLANTING RATES

Full Irrigation	140K/Acre	6 GPM
Limited Irrigation	75-90K/Acre	3-4 GPM
Light Irrigation	55-70K/Acre	1 1/2-2 GPM
Dry Land	25-55K	0 GPM

## SUGGESTED HARVEST MANAGEMENT

Do not cut or graze until the forage reaches 18" in height. Cut at 36" - 48" or 60 - 75 days for the best possible quality and highest possible yields. Cut 6" - 8" or above the second internode with a crimper to speed the drying and regrowth process. Harvest forage at about 70 - 75% moisture. Chop at 1/4" - 1/8" to get optimal packing.

Footnotes 1- Numerical Rating: 1 to 9	
1	Excellent
5	Average
9	Poor

Ratings and descriptions are based on the research and field observations that were compared with products from multiple locations and years. Read all labels and bag tags due to the reason that they contain conditions of sale, including limitations of warranty and remedy.
