

THREE LITTLE INDIANS®

Sorghum-Sudangrass Hybrid Blend

| AGRONOMIC ATTRIBUTE | |
|------------------------|----------------|
| Potential Forage Yield | 2 |
| Early Growth Rate | 3 |
| Regrowth | 2 |
| Average Plant Height | 8'-10' |
| Standability | 2 |
| Drought Tolerance | 1 |
| Leafiness | 3 |
| Avg. Seeds/Lb | 18,000 -20,000 |
| Fast Dry Down | 3 |

| PRIMARY USES | |
|-----------------|---|
| Hay | 2 |
| Hay Plow Down | 1 |
| Silage | 3 |
| Grazing/Pasture | 2 |
| Greenchop | 2 |

POSITIONING/MANAGEMENT

Three Little Indians® is a high-quality forage sorghum and sorghum-sudangrass hybrid blend that is used for forage production. The blend is at least 75% sorghum-sudangrass with the remainder being a forage sorghum. Three Little Indians® is great for cover cropping, hay and grazing cattle. Three Little Indians® is very palatable and grows 8-10 feet tall.

ANNUAL SUMMER MANAGEMENT

Planting Date: Late April through mid August. Soil temperature should be 60-65 or warmer. Planting too early could cause slow early growth and reduction in population.

Planting Depth: 3/4" to 1 1/2" deep dependent upon the soil moisture.

Row Width: Preferably drilled in narrow rows
Planting Method: Drill preferred.

Fertility: Nitrogen: 75 to 100 lbs./acre PPI & 50 to 75 lbs./acre after first cutting. Phosphorus: 20-60 lbs./acre, more if the soil testing indicates less than 30 lbs./acre. Potassium: 40-80 lbs./acre. A soil test should be performed for better accuracy. The above fertilization rates serve as a guide only

| SUGGESTED HARVEST HEIGHT | |
|--------------------------|-----------------------------------|
| Hay/Plow Down | Pre-boot or Flag Stage or 40"-60" |
| Grazing | 30-45 days or 20"-25" |
| Silage | 35"-50" |
| Greenchop | 30"-40" |

YIELD

1 to 2 cuttings dependent upon planting date, availability of water, and growing season. 3 to 6 tons/acre dry matter (20 to 40 tons green weight).

PRECISION SEED PLANTING RATE

| | | |
|--------------------|-------------|-------------|
| Full Irrigation | 140K/Acre | 6 GPM |
| Limited Irrigation | 75-90K/Acre | 3-4 GPM |
| Light Irrigation | 55-70K/Acre | 1 1/2-2 GPM |
| Dry Land | 25-55K | 0 GPM |

SUGGESTED HARVEST MANAGEMENT

Do not cut or graze until the forage reaches 18" in height. Cut at 36"- 48" or 60 -75 days for the best possible quality and highest possible yields. Cut 6"- 8" or above the second internode with a crimper to speed the drying and regrowth process. Harvest forage at about 70 -75% moisture. Chop at 1/4" -1/8" to get optimal packing

| Footnotes 1- Numerical Rating: 1 to 9 | |
|---------------------------------------|-----------|
| 1 | Excellent |
| 5 | Average |
| 9 | Poor |
